Aerial Archaeology Archive – Prague, CR

Institute of Archaeology CAS, Prague (ARUP-CAS)

- Data model for aerial archaeology
- Revision of the AAA data (sites, photos)
- Access to the AAA data through a new web application
- Promoting further research and heritage preservation

Impacts and recognition

Impact on:

- The information flow in the archaeology of the Czech Republic (and beyond)
- Progress in research, based on data that can be easily discovered, accessed and understood
- Measures for the preservation of the archaeological heritage
- We also...
 - Included the AAA in the system of the Archaeological Map of the Czech Republic (AMČR)
 - Created a Czech/English thesaurus for archaeological fieldwork data
- "It is clear that the AMČR involves more than just a database or digital archive with a map interface; it is actually an entire informational ecosystem of Czech archaeology that anticipates a situation... to which it will have to adapt if it is to function properly" – Dr. Ladislav Šmejda, University of West Bohemia, Pilsen
